Block Diagram Of The Advisor Monitoring System and All Other Machine Control Systems

The Advisor monitoring system monitors the operation of the machine.

The Advisor provides the operator with the following information:

- Operating Characteristics of the Machine
- Totals
- Warning Events
- Modes of Operation

Instantaneous information and lifetime totals about the condition of the machine and performance is constantly displayed by Advisor.

The Advisor will show information on a display. The display is located at the front of the right side console. The display is located above the lever for control of the blade.

The operator is able to adjust many of the settings in order to match the machine to the desired application. Advisor is used for the following:

- View the preferences of the operator.
- Change the preferences of the operator.
- Change the machine operation parameters.
