Equipment Control Valve

- (1) Rod End of Left Cylinder and Head End of Right Cylinder Relief Valve
- (2) Rod End of Right Cylinder and Head End of Left Cylinder Relief Valve
- (3) LIFT Relief Valve

Bench Test

1. Lower all attachments to the ground.
2. Stop the engine. Move the hydraulic control levers to all positions so that the pressure in the hydraulic system is released.
3. Relieve the pressure in the hydraulic tank.
4. Remove the relief valve that needs to be tested.
5. Install the relief valve in the manifold.
6. Connect the manifold to the hydraulic test bench.
7. Slowly increase pressure. Note the pressure when the relief valve opens. Make an adjustment to the relief valve, if necessary.
