

Storage of Refrigerant Containers

CAUTION:

Refrigerant containers are under pressure, and this pressure increases rapidly when the temperature of the container rises. The thin-walled refill containers are particularly at risk in this respect. Refrigerant containers must never be exposed to temperatures over 52°C (120°F).

Never store pressurized containers in the vicinity of heat sources or in places exposed to direct sunlight. Never open pressurized containers by force or damage them in any way.

Important Note

Refrigerant

Use R134a refrigerant only. Any other refrigerant will impair the function of the air-conditioning system and render all claims for damages made against the manufacturer null and void.

PAG Refrigerant Oil

Use prescribed refrigerant oil only. Failure to do so will result in damage to the compressor.
